

## Holdings Without Items

- **Product:** RapidILL

If you have holdings that have a summary holdings statement in subfield \$a of the 866 field, but the holdings records have no items, use the following to have the summary holdings statement published to Rapid.

In the relevant Rapid publishing profiles (the Physical profiles), in the Data Enrichment tab, set up the Physical Holdings Enrichment as follows:

Holdings Tag	Holdings Subfield	Bib Tag	Bib Subfield
1. 866	a	955	m
2. 852	b	955	q
3. 852	h	955	t
4. 852	c	955	r

### Physical Holdings Enrichment

This causes information from the holdings record to be published to Rapid, including:

- Library – 852\$b
- Location – 852\$c
- Call Number – 852\$h (or other relevant subfields)
- Summary holdings – 866\$a

In addition, set up a normalization rule such as the following, to make sure that the published record uses information from the holdings record only if there are no physical items.

Create Rules in the Metadata editor found in the bottom left corner.

In the Rules Tab, Create a new normalization rule.

```
rule "if there is a 954 and a 955 then delete the 955"
when
  (exists "954.m.*" ) AND (exists "955.m.*" )
then
  removeField "955"
end

rule "change 955 to 954 if there is a 955 and there is not a 954"
when
  (not exists "954.m.*" ) AND (exists "955.m.*" )
then
  changeField "955" to "954"
end
```

The result is a record that has either:

- 954 fields based on the physical items, with each item in a separate 954 field that has all of the q,t,r,m subfields

OR

- 954 fields based on the holdings record, with each holdings split into two 954 fields that have the same \$8

Set the normalization rule in the Data Enrichment tab of the publishing profile. See the following example:

The screenshot shows a web interface with two tabs: 'Profile Details' and 'Data Enrichment'. The 'Data Enrichment' tab is selected. Below the tabs is a section titled 'Bibliographic Normalization'. Under this section, there are two options: 'Correct the data using normalization rules' and 'Rule for Rapid'. The 'Rule for Rapid' option is selected. Below these options is a checkbox labeled 'Linked Data enrichment', which is currently unchecked.

Data Enrichment Tab

We recommend that you indicate that you used this setup when notifying the [Rapid Staff](#) about your readiness to upload the records.
