## Make a MARC subfield clickable (hyperlinked) in Voyager Tomcat Webvoyage

- **Product:** Voyager
  - **Relevant for Installation Type:** Multi-Tenant Direct, Dedicated-Direct, Local, TotalCare
- 

### Question

We would like to make the 520 field, subfield u, "clickable" in WebVoyage. It is currently displaying as plain text and not clickable as a hyperlink. How can we make it clickable?

### Answer

Tomcat Webvoyage is not set up to display links unless they're in an 856 field. Displaying the 856 links requires using a special Display Code (3000) in displaycfg.xml which calls the BMD3000 template in the display.xsl file to create the links.

To make a MARC field that is *not* an 856 field clickable, you would need to develop custom programming. This is beyond the scope of Voyager Support. The Voy-L listserv would be a good place to ask if any customers have developed such code.

### Additional Information

See Chapter 7 of the [WebVoyage Architecture Overview and Configuration Models](#) guide for more information on the Display Codes.
