
How do I configure a connection to Alma in EndNote?

- **Product:** Alma
-

How do I configure EndNote to search our catalog via Z39.50?

What options do I fill in for the EndNote connection?

Answer

Assuming you have already configured and activated the [Z39.50 integration profile](#), use these settings:

Configuring the z39.50 client: You must configure the Alma IP address, port, and database name on the Z39.50 client machine:

The address/port to be configured is:

<Alma CNAME domain>:1921 (or 210, if you are working with Refworks – see To configure a Z39.50 Refworks client)

Database: Library Catalog (or whatever name you have for it--this just displays in EndNote)

Database Name: [INSTITUTION_CODE] where [INSTITUTION_CODE] is in the form XXCODE_INST

Element Set: F

Port ID: 1921

Record Syntax: MARC21

Text: UTF-8

If you configured the Z39.50 service to require a User Name and/or Password, add those to the EndNote connection as well (this is rare).
