

---

## January Sneak Preview

---

### Note

The features below are currently planned for the next release. However, some of these features may, for various reasons, not be included in this month's release, but rather in a future Alma release.

---

---

## Fulfillment

- **Library level patron notifications** - It will be possible to set Alma to split aggregated letters by the library owner. For example, it will be possible to set Alma to send a separate Borrower Activity notification for each library where the patron is active.
- **Support for InnReach D2IR APIs** - It will be possible to directly integrate Alma and Innreach using API based integration, without requiring the InnReach DCB component.
- **Automatic 'Will Supply' message** - It will be possible to set Alma to automatically send a 'Will Supply' message for every lender request that is in process, i.e. the internal 'ship digitally/physically' request has been created for it.

---

## Resource Management

**Portfolio Loader Support KBART format** - Alma Portfolio Loader will support using KBART format files for electronic resource management of electronic collection portfolios (in addition to the existing Alma Proprietary format).

---

## Digital Resource Management

- **Idea Exchange - Add Primo collection breadcrumbs in Alma viewer**- End users will be able to navigate directly from the digital viewer to the Primo collection it belongs to, in one click.
- **Idea Exchange - Strict Download control for images** Restricting download for digital files will be expanded to block right-click actions such as save-as on images, providing stricter prevention of content redistribution.
