

## Testing Rapido

### Testing Rapido in Your Sandbox

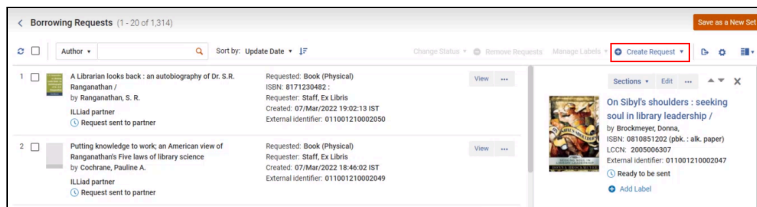

Use your sandbox environment to:

YES	NO
<ul style="list-style-type: none"> <li>• Create and use Rapido Sets</li> <li>• Use the borrowing and lending task list (brief view, right pan, etc.)</li> <li>• Use facets, multi-select values, printing, etc.</li> <li>• Access the Rapido configuration which includes the options to test mediation rules, copyright rules, discovery configurations, defining Rapido members</li> <li>• Create peer to peer partners and testing between sandboxes</li> <li>• Configure locally managed pods (ex. terms to present in the Rapido tiles)</li> <li>• Test discovery including Rapido tiles and request forms</li> <li>• Place and create borrowing requests</li> </ul>	<ul style="list-style-type: none"> <li>• Do an end-to-end Rapido workflow</li> <li>• Borrowing requests are created but not sent. This means that the testing is until creation (both for returnables and document delivery).</li> <li>• The above includes the Fill locally action.</li> </ul>

### Testing with a Selected Partner

To create a testing environment with a selected partner:

1. Manually create a borrowing request by selecting **Create Request**. Select a **Citation Type** and select **Choose**.

**Manually create a borrowing request**

2. Select **Send Directly to Partner**.

### Send Directly to Partner

3. Check the relevant partner and select **Select** to start the borrowing request flow.

### Note

The Resource Sharing partners on the **Community** tab are copied to the **Institution** tab.  
The Terms of Use (ToU) are the peer-to-peer ToU, not Rapido's ToU.

### Resource Sharing Partner List

## Testing Your Workflow for Borrowing/Lending Requests

This feature enables libraries to interact locally in order to create borrowing and lending requests at the local institution for both physical and digital requests. This enables libraries to test and train users in Rapido and enables them to test and view the outcome of complete workflows.

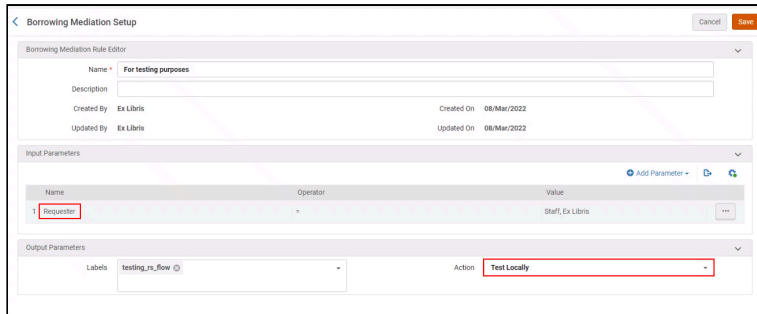

Create a borrowing rule with the parameter **Requester** ([Configuration > Resource Sharing > Rapido Rules > Borrowing Mediation Rules](#)) and the **Action** `Test Locally` configured.

---

## Note

The rule only applies to one Requester. If you want to apply the rule to multiple Requesters, you must add multiple rules.

---

The screenshot shows the 'Borrowing Mediation Setup' window. The 'Borrowing Mediation Rule Editor' section has the following details:

- Name: For testing purposes
- Description: (empty)
- Created By: Ex Libris
- Updated By: Ex Libris
- Created On: 08/Mar/2022
- Updated On: 08/Mar/2022

The 'Input Parameters' section contains a table with one row:

Name	Operator	Value
Requester	=	Staff, Ex Libris

The 'Output Parameters' section shows:

- Labels: testing\_rs\_flow
- Action: Test Locally

## Mediation Setup for testing locally

---

## Note

Since this feature is for testing purposes, the status of the borrowing request might be **Locate failed** if your library does not have the requested item. You can still continue testing the flow by selecting [Edit > Ship item physically](#) to ensure the process behaves as expected. Move requests are not created automatically.

- 
- If the mediation rule is run a second time and after performing the **Test Locally** action, Rapido does not re-run the action again.
  - If you reject the request from the lending side, the borrowing request is also closed.
